

The Atlas

66W, 38th Street, Manhattan, New York, United States

Exceptional location, excellent result - our company equipped this building with about 800sqm of 10cm thickness **Moca Cream Fine Grain** ("Relrosa") honed material, and other thicknesses, in a total of over 100 cubic meters with more than 500LM of false joints, 240LM of recesses, 3 thousand slots and almost 2.000 anchor holes.

A pride to know that our stone and knowledge is, also, at central Manhattan, "with a view to Empire State Building"!
