

Table Feet in Forest Brown

Sintra, Portugal

This small Project consisted in the supply of an extraordinary pair of table-feet made in **Forest Brown**, polished marble.

As in other jobs from our company, also here the 25cm-thickness-appearance of the pieces is faked because, in reality, the table feet were made from the cut, assemble, re-enforcement and perfect finishing of 2cm thickness material.

The special beauty of the material, Forest Brown, and the quality of a work that even matches the veining from one face to the other of the parallelepipeds, resulted in 2 unique and fabulous decoration pieces.
